University of Michigan

08/2021 – 09/2021

Introduction to Scripting in Python Specialization.

Rice University

07/2021 – 09/2021

Projects

EMIS

Employee Management System

07/2022 – present

We are developing a single application with role-based access, consisting of four modules: HR, Payroll, Finance, and Inventory. We will be using Node.js, React.js, and a PostgreSQL database for this project.

The Snake Game

A python GUI game build using pygame it has 2 levels 1st level without any restriction and 2nd level with border restriction

Library Management System

The application is built using Node.js, Express, and React. Postgres SQL is used as the database. It features user authentication with different access levels for different types of users. Users can purchase books with a transaction table and enjoy many other functionalities.
